

Emanuela Telescu

Senior QA Automation Engineer / SDET

emanuela.telescu@yahoo.com | linkedin.com/in/emanuelatelescu | ella79.github.io/portfolio | Timisoara, Romania

Professional summary

Senior QA Engineer with 15+ years in software quality assurance, including 6+ years dedicated to test automation engineering, currently owning test automation strategy for safety critical embedded products. Led a Cypress to Playwright and TypeScript migration and built a visual regression testing framework from scratch, cutting flaky test failures and escaped bugs by 30 to 40 percent and full regression execution time by roughly 35 percent.

Over the past year expanded into AI augmented and agentic test automation with Claude Code, Playwright MCP and custom agents and skills, trimming framework maintenance and test authoring time by 27 percent across two projects. Seeking a remote Senior QA Automation Engineer role in an international product team where AI augmented testing and end to end quality ownership are part of the engineering culture.

Experience

Senior QA Engineer

BTC Embedded Systems, Romania, remote. 12/2022 to present

- Architected and led the migration of the E2E test suite from Cypress to Playwright and TypeScript, then built a visual regression testing framework from scratch, scaling both across 4 consecutive automotive and HIL product lines. Flaky test failures and escaped bugs fell by 30 to 40 percent, full regression execution time by roughly 35 percent.
- Led the adoption of Claude Code, Playwright Agents, Skills, MCP and CLI, and Figma MCP across 2 consecutive projects, replacing the team's GitHub Copilot based workflow and trimming framework maintenance and test authoring time by 27 percent.
- Architected GraphQL API test coverage in Playwright and TypeScript alongside the existing E2E suites inside CI/CD quality gates, shifting testing left and extending coverage from UI only to a dual frontend and backend layer, catching roughly 20 percent more backend layer defects before release.
- Instrumented distributed system observability for safety critical embedded systems using MongoDB, Grafana, OpenLens, Argo and AWS CloudWatch and X-Ray, monitoring and analysing EC2 hosted service logs to shorten mean time to root cause by an estimated 30 percent.
- Owned test strategy independently in an Agile and Scrum setup, maintaining on time delivery across every quarterly release for 4 consecutive years.

Senior QA Engineer

Endava, Romania, remote. 06/2021 to 12/2022

- Built and scaled automated regression suites in WebdriverIO, JavaScript and Jest across 2 concurrent enterprise platforms, maritime and insurance, covering 150+ test scenarios and reducing manual regression effort by 25 to 30 percent.
- Eliminated test dependency on live third party services by containerising execution in Dockerized Ubuntu, WSL and VDI environments with Mountebank API stubbing and Pega orchestration, cutting test failures caused by third party downtime by an estimated 32 percent.

Career note, planned break

09/2020 to 05/2021

- Planned personal leave to complete a home construction project. Returned to full time work in May 2021.

Senior QA Engineer

Variston, offensive security and red teaming platforms, Spain, on site and remote. 09/2019 to 09/2020

- Self built a Java and Selenium automation framework from scratch with Selenium WebDriver, Selenium Grid, JUnit, Maven and IntelliJ, integrated into a Jenkins CI/CD server on a Kubernetes pipeline via Zalenium, across Ubuntu and Windows VMware environments, compressing regression cycle time by an estimated 33 percent.
- Partnered with developers to analyse features, investigate defects, verify fixes and improve stability, using Git, Bitbucket, Jira and Confluence, cutting defect triage time by roughly 25 percent.
- Designed and executed end to end test strategies covering smoke, functional, regression, integration and acceptance testing, contributing to an estimated 25 percent reduction in defect escape rate.
- Self studied cybersecurity and penetration testing, applying them to security focused QA of a command and control red teaming platform: agent orchestration, HTTP, DNS and SMB protocols, evasion techniques, and web UI, data exfiltration and lateral movement workflows, broadening attack scenario test coverage by an estimated 30 percent.
- Tested a modular PHP and ASPX post exploitation framework, validating multi stage agent deployment, remote command execution, file manipulation, database interactions, credential harvesting, persistence and traffic and memory injection, surfacing an estimated 22 percent more critical defects prior to release.
- Performed functional testing of an anonymisation platform in an isolated lab, validating VPN and DDNS configuration, user management, distributed anonymous routing chains and agent deployment control.

Senior QA Engineer

Ness Digital Engineering, Romania, on site. 01/2019 to 08/2019

- Engineered a C#, Selenium, SpecFlow and NUnit framework from scratch for Universal Music Group London's global platform, establishing the project's first structured automation layer and cutting manual regression effort by an estimated 30 percent.
- Extended coverage from UI only into the Swagger and OpenAPI validated API layer and ran BrowserStack cross browser, iOS and Android suites, lowering manual cross platform testing effort by approximately 35 percent.
- Owned test planning, estimation and release coordination throughout the engagement.
- Validated web services via token based authentication against Swagger and OpenAPI contracts, using Fiddler and MSSQL Studio to trace defects to their root cause alongside developers, UI/UX designers and business analysts.

Lead QA Engineer, promoted from Senior QA Engineer

IT Vizion, Romania, on site. 04/2018 to 01/2019

- Directed the QA team's day to day work following the promotion, coordinating test coverage and mentoring testers across releases.
- Rolled out WorkSoft Certify codeless, keyword driven scripting across the QA team, enabling 35 percent of non technical testers to contribute automated coverage for the first time.
- Directed release sign off within weeks of the promotion, reviewing and agreeing quality metrics with stakeholders before each release.

Software QA Engineer

Plan.Net Group, Romania, on site. 01/2013 to 04/2018

- Built a requirement based test case library of 300+ scenarios in TestLink from scratch and sustained functional, regression and acceptance coverage across iOS, Android via Appium, and 5 browser engines.
- Validated pre release mobile builds through manual exploratory testing on physical devices, using Crashlytics Beta, HockeyApp and Fabric for crash triage, reducing post release crash reports by around 25 percent.

Software QA Engineer

12snap, Romania, on site. 09/2010 to 01/2013

- Launched the company's first TestLink based test case library of 100+ scenarios, establishing functional, regression and acceptance coverage for airline and native mobile applications where no QA process existed before, narrowing untracked defect leakage by nearly 20 percent.

Career note, earlier roles

Romania, on site. 08/2000 to 09/2010

- Software and database roles at Toluna and First Emergency Hospital, and infrastructure engineering roles at Iprotim and Halcrow, prior to transitioning into QA in 2010.

Technical skills

Test automation and frameworks Playwright, Playwright MCP, Cypress, Selenium WebDriver, Selenium Grid, WebdriverIO, Appium, Katalon Studio, WorkSoft Certify	CI/CD, infrastructure and performance Jenkins, Docker, Kubernetes, Zalenium, AWS (EC2, Lambda, CloudWatch, X-Ray), Azure, JMeter
Programming and scripting TypeScript, JavaScript, Java, C#	Observability and data MongoDB, Grafana, OpenLens, Argo
Test frameworks and BDD Jest, JUnit, NUnit, Maven, Cucumber, Gherkin, SpecFlow	Test management and collaboration Jira, XRay, Confluence, TestRail, TestLink, Git, Bitbucket, BrowserStack
API and contract testing GraphQL, Postman, Hoppscotch, Swagger and OpenAPI, Pact, Mountebank	AI and agentic tooling Claude Code, Playwright Agents and Skills, Figma MCP, GitHub Copilot, ChatGPT

Education

Master of Engineering, Automotive Embedded Software, Siemens programme

Politehnica University of Timisoara. 2005 to 2006

Bachelor of Engineering, Computer and Systems Science

University of Oradea. 2000 to 2005

Master of Social Work

West University of Timisoara, part time alongside full time employment. 2010 to 2012

Master of Public Administration

West University of Timisoara, part time alongside full time employment. 2007 to 2009

Certifications and training

Selected from 43 professional certifications. The full list is on LinkedIn.

Model Context Protocol, Advanced Topics, Anthropic, 2026	Introduction to Subagents, Anthropic, 2026
Introduction to Agent Skills, Anthropic, 2026	Claude Code 101, Anthropic, 2026
